Office Action Summary	Application No. 10/537,820	Applicant(s) BASSLER ET AL.	
	Examiner Wayne Langel	Art Unit 1754	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1754

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-8 and 14-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patentschrift 477437 in view of Oehsen et al. Patentschrift 477437 discloses a process for the catalytic preparation of HCN from formamide, in which formamide vapor is passed at high velocity through tubes which are made of catalytically active or lines with this and otherwise contain no catalyst. (See the paragraph bridging pages 2 and 3 of applicants' specification.) The differences between the process disclosed by Patentschrift 477437, and that recited in applicants' claims, are that Patentschrift 477437 does not disclose that the inner reactor surface should comprise a steel comprising iron and chromium and nickel, and that the process should be conducted in the presence of oxygen. It would be obvious from Oehsen et al to carry out the process of Patentschrift 477637 in the presence of oxygen and in a reactor comprising an iron-nickel-chromium steel, since Oehsen et al teach at col. 2, lines 3-10 that the presence of air serves to increase both the formamide conversion and the HCN selectivity, and further discloses at col. 2, lines 44-55 that it is advantageous to carry out the process in the presence a chromium nickel stainless steel.

The other references are made of record for disclosing the decomposition of formamide to produce HCN.
